	Sheet Molding Compound						
	(Glass reinforced polyester)						
	Inorganic lead and electrolyte (sulfuric acid) are the pri	mary components of e	very battery manufactur	ed by Hawker.			
	Other ingredients may be present dependent upon batte						
IV. FIRS	ST AID MEASURES	· · ·	•				
Inhalatio	<u>n:</u>						
	Sulfuric Acid: Remove to fresh air immediately. If bro	eathing is difficult, give	e oxygen. Consult a phy	sician			
	Lead: Remove from exposure, gargle, wash nose and l	ips; consult physician.					
Ingestion	<u>:</u>						
	Sulfuric Acid: Give large quantities of water; do not in	duce vomiting or aspin	ration into the lungs may	occur and can cause permanent injury or death;			
	consult a physician.						
	Lead: Consult physician immediately.						
Skin:							
	Sulfuric Acid: Flush with large amounts of water for a	t least 15 minutes; rem	ove contaminated clothi	ng completely, including shoes.			
	If symptoms persist, seek medical attention. Wash cont	aminated clothing befo	ore reuse. Discard contai	minated shoes.			
	Lead: Wash immediately with soap and water.	8					
Eyes:							
23,001	Sulfuric Acid and Lead: Flush immediately with large	amounts of water for a	least 15 minutes while	lifting lids.			
	Seek immediate medical attention if eyes have been ex			8			
V FIRE	FIGHTING MEASURES	posed directly to deld.					
Flash Poi		Flammable Limits:	LEL = 4.1% (Hydrogen	Gas) UEL = 74.2%			
	shing Media: CO2; foam; dry chemical. Do not use carbon						
	ire Fighting Procedures:	I dioxide directly on et	ins. Avoid breathing va	ors. Ose appropriate media for surrounding me.			
Special F	If batteries are on charge, shut off power. Use positive	pressure self contain	ed breathing apparatus	Water applied to electrolyte generates			
				water applied to electrolyte generates			
	heat and causes it to spatter. Wear acid-resistant clothing, gloves, face and eye protection. But note that strings of series connected batteries may still pose risk of electric shock even when charging equipment is shut down.						
		still pose risk of electri	c snock even when char	ging equipment is shut down.			
Unusual	Fire and Explosion Hazards:	• • •	ст. и. т. — т. т. т.				
	Highly flammable hydrogen gas is generated during charging and operation of batteries. To avoid risk of fire or explosion, keep sparks or other						
	sources of ignition away from batteries. Do not allow metallic materials to simultaneously contact negative and positive terminals of cells and						
	batteries. Follow manufacturer's instructions for install	ation and service.					
	IDENTAL RELEASE MEASURES						
Spill or L	eak Procedures:						
	Stop flow of material, contain/absorb small spills with	•		· ·			
	neutralize spilled electrolyte with soda ash, sodium bicarbonate, lime, etc. Wear acid-resistant clothing, boots, gloves, and face shield. Do not						
	allow discharge of unneutralized acid to sewer. Acid m	•	ordance with local, state	, and federal requirements.			
	Consult state environmental agency and/or federal EPA						
VII. HAN	NDLING AND STORAGE						
Handling	<u>:</u>						
	volved in recycling operations, do not breach the casing or						
which may	y allow electrolyte leakage. There may be increasing risk o	f electric shock from st	trings of connected batte	vries.			
Keep cont	tainers tightly closed when not in use. If battery case is bro	ken, avoid contact wit	h internal components.				
Keep vent	t caps on and cover terminals to prevent short circuits. Pla	ce cardboard between	layers of stacked automo	tive batteries to avoid damage and short circuits.			
Keep awa	y from combustible materials, organic chemicals, reducing	substances, metals, str	rong oxidizers and water	. Use banding or stretch wrap to secure items for			
shipping.			C	C I			
Storage:							
	eries in cool, dry, well-ventilated areas with impervious su	rfaces and adequate co	ntainment in the event of	f spills. Batteries should			
	bred under roof for protection against adverse weather cond	-		-			
				-			
	with adequate water supply and spill control. Avoid damage to containers. Keep away from fire, sparks and heat. Keep away from metallic objects could						
	e terminals on a battery and create a dangerous short-circui						
Charging		10					
	possible risk of electric shock from charging equipment an	-					
-	whenever not in use and before detachment of any circuit c						
	ng space should be ventilated. Keep battery vent caps in position. Prohibit smoking and avoid creation of flames and sparks nearby.						
Wear face	e and eye protection when near batteries being charged.

NOTES:

(b) As inhalable aerosol

(c) Thoracic fraction

(e) Based on OEL;s Of Austria, Belgium, Denmark, France, Netherlands, Switzerland, & U.K.

Engineering Controls (Ventilation):

Store and handle in well-ventilated area. If mechanical ventilation is used, components must be acid-resistant.

Handle batteries cautiously to avoid spills. Make certain vent caps are on securely. Avoid contact with internal components. Wear protective clothing, eye and face protection when filling, charging or handling batteries. Do not allow metallic materials to simultaneously contact both the positive and negative terminals of the batteries. Charge the batteries in areas with adequate ventilation. General dilution ventilation is acceptable.

Respiratory Protection (NIOSH/MSHA approved):

None required under normal conditions. When concentrations of sulfuric acid mist are known to exceed the PEL, use NIOSH or MSHA-approved respiratory protection.

Skin Protection:

If battery case is damaged, use rubber or plastic acid-resistant gloves with elbow-length gauntlet, acid-resistant apron, clothing and boots.

Eye Protection:

If battery case is damaged, use chemical goggles or face shield.

Other Protection:

In areas where sulfuric acid is handled in concentrations greater than 1%, emergency eyewash stations and showers should be provided,

with unlimited water supply. Acid-resistant apron. Under severe exposure emergency conditions, wear acid-resistant clothing and boots.

Face shield recommended when adding water or electrolyte to batteries, wash hands after handling.

IX. PHYSICAL AND CHEMICAL PROPERTIES

Properties Listed Below are for Electrolyte:			
Boiling Point:	203 - 240° F	Specific Gravity (H2O = 1):	1.215 to 1.350
Melting Point:	N/A	Vapor Pressure (mm Hg):	10
Solubility in Water:	100%	Vapor Density (AIR = 1):	Greater than 1
Evaporation Rate: (Butyl Acetate = 1)	Less than 1	% Volatile by Weight:	N/A
pl	I: ~1 to 2	Flash Point:	Below room temperature (as hydrogen gas)
LEL (Lower Explosive Limit)	4.1% (Hydrogen)	UEL (Upper Explosive Limit)	74.2% (Hydrogen)
Appearance and Odor:	Manufactured article; no apparent odor. Electrolyte is a clear liquid with a sharp, penetrating, pungent odor.		

	ECO #:	1002486
X. STABILITY AND REACTIVITY		
Stability: Stable <u>X</u> Unstable		
This product is stable under normal conditions at ambient temperature.		
Conditions To Avoid: Prolonged overcharge; sources of ignition		
Incompatibility: (Materials to avoid)		
Sulfuric Acid: Contact with combustibles and organic materials may cause fire and explosion. Also reacts violently with strong reducing agent	s,	
metals, sulfur trioxide gas, strong oxidizers and water. Contact with metals may produce toxic sulfur dioxide fumes and may release flammable	:	
hydrogen gas.		
Lead Compounds: Avoid contact with strong acids, bases, halides, halogenates, potassium nitrate, permanganate, peroxides, nascent hydrogen		
and reducing agents.		
Arsenic compounds: strong oxidizers; bromine azide. NOTE: hydrogen gas can react with inorganic arsenic to form the highly toxic gas-arsine.		
Hazardous Decomposition Products:		
Sulfuric Acid: Sulfur trioxide, carbon monoxide, sulfuric acid mist, sulfur dioxide, and hydrogen sulfide.		
Lead Compounds: High temperatures likely to produce toxic metal fume, vapor, or dust; contact with strong acid or base or presence of nascen	t	
hydrogen may generate highly toxic arsine gas.		
Hazardous Polymerization:		
Will not occur		
XI. TOXICOLOGICAL INFORMATION		
Routes of Entry:		
Sulfuric Acid: Harmful by all routes of entry.		
Lead Compounds: Hazardous exposure can occur only when product is heated, oxidized or otherwise processed or damaged to create dust, vap	or	
or fume. The presence of nascent hydrogen may generate highly toxic arsine gas.		
Inhalation:		
Sulfuric Acid: Breathing of sulfuric acid vapors or mists may cause severe respiratory irritation.		
Lead Compounds: Inhalation of lead dust or fumes may cause irritation of upper respiratory tract and lungs.		
Ingestion:		
Sulfuric Acid: May cause severe irritation of mouth, throat, esophagus and stomach.		
Lead Compounds: Acute ingestion may cause abdominal pain, nausea, vomiting, diarrhea and severe cramping. This may lead rapidly to syste	mic	
toxicity and must be treated by a physician.		
Skin Contact:		
Sulfuric Acid: Severe irritation, burns and ulceration.		
Lead Compounds: Not absorbed through the skin.		
Arsenic Compounds: Contact may cause dermatitis and skin hyper pigmentation.		
Eye Contact:		
L'i Conmett		
Sulfuric Acid: Severe irritation, burns, cornea damage, and blindness.		
Sulfuric Acid: Severe irritation, burns, cornea damage, and blindness.		
Sulfuric Acid: Severe irritation , burns, cornea damage, and blindness. Lead Components: May cause eye irritation. Effects of Overexposure - Acute: Sulfuric Acid: Sulfuric Acid: Severe skin irritation, damage to cornea, upper respiratory irritation.		
<u>Sulfuric Acid:</u> Severe irritation , burns, cornea damage, and blindness. <u>Lead Components:</u> May cause eye irritation. Effects of Overexposure - Acute:

Lead Compounds: Lead is listed as a Group 2A carcinogen, likely in animals at	amage, a the .1200 nis is	
Sulfuric Acid: Severe irritation , burns, cornea damage, and blindness. Lead Components: May cause eye irritation. Effects of Overexposure - Acute: Sulfuric Acid: Sulfuric Acid: Severe skin irritation, damage to cornea, upper respiratory irritation. Lead Compounds: Symptoms of toxicity include headache, fatigue, abdominal pain, loss of appetite, muscular aches and weakness, sleep disturbances and irritability. Effects of Overexposure - Chronic: Sulfuric Acid: Possible erosion of tooth enamel, inflammation of nose, throat and bronchial tubes. Lead Compounds: Anemia; neuropathy, particularly of the motor nerves, with wrist drop; kidney damage; reproductive changes in males and females. Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some toxicologists report abnoc conduction velocities in persons with blood lead levels of 50mcg/100 ml or higher. Heavy lead exposure may result in central nervous system or encephalopathy and damage to the blood-forming (hematopoietic) tissues. Carcinogenicity: Sulfuric Acid: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid mist containing sulfuric acid" as Group 1 carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfuric acid or sulfuric acid mist(sulfuric acid mist). Lead Compounds: Lead Compounds: International Agency for Research on Sulfuric acid mist). Lead Compounds: Sulfuric Acid: </td <td>amage, a the .1200 nis is</td> <td></td>	amage, a the .1200 nis is	

Acute Toxicity: Inhalation LD50:

Electrolyte: LC50 rat: 375 mg/m3; LC50: guinea pig: 510 mg/m3

Elemental Lead: Acute Toxicity Point Estimate = 4500 ppmV (based on lead bullion) Elemental Arsenic: No data

Oral LD50:

<u>Electrolyte:</u> rat: 2140 mg/kg <u>Elemental Lead:</u> Acute Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion) <u>Elemental Arsenic:</u> LD50 mouse: 145 mg/kg <u>Elemental Antimony:</u> LD50 rat: 100 mg/kg

Additional Health Data:

All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most inhalation problems can be avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion: wash hands, face, neck and arms thoroughly before eating, smoking or leaving the worksite. Keep contaminated clothing out of non-contaminated areas, or wear cover clothing when in such areas. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated areas. Work clothes and work equipment used in contaminated areas must remain in designated areas and never taken home or laundered with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment.

The 19th Amendment to EC Directive 67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase 61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms.

Kisk pillase 01.1	viay cause namino the unboint chind, applies to lead compounds, especially soluble forms.			
XII. ECOLOGICAL INFOR	RMATION			
Environmental Fate:				
Lead is very pers	istent in soil and sediments. No data on environmental degradation. Mobility of metallic lead between ecological compartments is slow.			
Bioaccumulation	of lead occurs in aquatic and terrestrial animals and plants but little bioaccumulation occurs through the food chain.			
Most studies incl	ude lead compounds and not elemental lead.			
Environmental Toxicity: Aqu	uatic Toxicity:			
Sulfuric acid:	24-hr LC50, freshwater fish (Brachydanio rerio): 82 mg/L			
	96 hr- LOEC, freshwater fish (Cyprinus carpio): 22 mg/L			
Lead:	48 hr LC50 (modeled for aquatic invertebrates): <1 mg/L, based on lead bullion			
Arsenic:	24 hr LC50, freshwater fish (Carrassisus auratus) >5000 g/L.			
Additional Information:				
· No known effects on stratospheric ozone depletion.				
· Volatile organic compounds: 0% (by Volume)				
· Water Endangering Class (WGK): NA				
XIII. DISPOSAL CONSIDE	RATIONS (UNITED STATES)			
Spent batteries: Send to seco	ondary lead smelter for recycling. Spent lead-acid batteries are not regulated as hazardous waste when the requirements of			
40 CFR Section 266.80 are met. This should be managed in accordance with approved local, state and federal requirements. Consult state environmental				
agency and/or federal EPA.				
Electrolyte:				
Place neutralized slurry into sealed containers and handle as applicable with state and federal regulations. Large water-diluted spills, after				
neutralization and testing, should be managed in accordance with approved local, state and federal requirements. Consult state environmental				
agency and/or federal EPA.				
Following local, State/Provinc	ial, and Federal/National regulations applicable to end-of-life characteristics will be the responsibility of the end-user.
