#### III. COMPOSITION/INFORMATION ON INGREDIENTS

	1	
Components	CAS Number	Approximate % by
		Wt.
Inorganic Lead Compound:		
Lead	7439-92-1	60-90
* Antimony	7440-36-0	2
* Arsenic	7440-38-2	0.2
* Calcium	7440-70-2	0.05
* Tin	7440-31-5	0.2
Electrolyte (Sulfuric Acid (H2SO4/H2O))	7664-93-9	0-30
Case Material:		5-15
Polypropylene	9003-07-0	
Polystyrene	9003-53-6	
Styrene Acrylonitrile	9003-54-7	
Acrylonitrile Butadiene Styrene	9003-56-9	
Styrene Butadiene	9003-55-8	
Polyvinylchloride	9002-86-2	
Polycarbonate, Hard Rubber, Polyethylene	9002-88-4	

	Power/Full Solutions ECO #: 1002580
	Inorganic lead and electrolyte (sulfuric acid) are the primary components of every battery manufactured by EnerSys.
	Other ingredients may be present dependent upon battery type. Contact your EnerSys representative for additional information.
V. FIRS	T AID MEASURES
nhalatio	
	Sulfuric Acid: Remove to fresh air immediately. If breathing is difficult, give oxygen. Consult a physician.
	Lead: Remove from exposure, gargle, wash nose and lips; consult physician.
ngestion	
	Sulfuric Acid: Give large quantities of water; do not induce vomiting or aspiration into the lungs may occur and can cause permanent injury or death;
	consult a physician.
	Lead: Consult physician immediately.
Skin:	
	Sulfuric Acid: Flush with large amounts of water for at least 15 minutes; remove contaminated clothing completely, including shoes.
	If symptoms persist, seek medical attention. Wash contaminated clothing before reuse. Discard contaminated shoes.
	Lead: Wash immediately with soap and water.
Eyes:	
	Sulfuric Acid and Lead: Flush immediately with large amounts of water for a least 15 minutes while lifting lids.
	Seek immediate medical attention if eyes have been exposed directly to acid.
V. FIRE	FIGHTING MEASURES
lash Poi	
Extinguis	ing Media: CO2; foam; dry chemical. Do not use carbon dioxide directly on cells. Avoid breathing vapors. Use appropriate media for surrounding fire.
	re Fighting Procedures:
	If batteries are on charge, shut off power. Use positive pressure, self-contained breathing apparatus. Water applied to electrolyte generates
	heat and causes it to spatter. Wear acid-resistant clothing, gloves, face and eye protection.
	But note that strings of series connected batteries may still pose risk of electric shock even when charging equipment is shut down.
Unusual l	'ire and Explosion Hazards:
e nubuur 1	Highly flammable hydrogen gas is generated during charging and operation of batteries. To avoid risk of fire or explosion, keep sparks or other
	sources of ignition away from batteries. Do not allow metallic materials to simultaneously contact negative and positive terminals of cells and
	batteries. Follow manufacturer's instructions for installation and service.
VL ACC	DENTAL RELEASE MEASURES
	eak Procedures:
	Stop flow of material, contain/absorb small spills with dry sand, earth, and vermiculite. Do not use combustible materials. If possible, carefully
	neutralize spilled electrolyte with soda ash, sodium bicarbonate, lime, etc. Wear acid-resistant clothing, boots, gloves, and face shield. Do not
	allow discharge of unneutralized acid to sewer. Acid must be managed in accordance with local, state, and federal requirements.
	Consult state environmental agency and/or federal EPA.
VII HAN	DLING AND STORAGE
Handling	
	olved in recycling operations, do not breach the casing or empty the contents of the battery. Handle carefully and avoid tipping,
	allow electrolyte leakage. There may be increasing risk of electric shock from strings of connected batteries.
	iners tightly closed when not in use. If battery case is broken, avoid contact with internal components.
-	caps on and cover terminals to prevent short circuits. Place cardboard between layers of stacked automotive batteries to avoid damage and short circuits.
· ·	of from combustible materials, organic chemicals, reducing substances, metals, strong oxidizers and water. Use banding or stretch wrap to secure items for
hipping.	non combustible materials, organic chemicals, reducing substances, metals, strong oxidizers and water. Use banding of stretch wrap to secure nemis for
Storage:	rise in cost, dry, well wantileted errors with impervious surfaces and edgewate containment in the event of spills. Patteries should
	ries in cool, dry, well-ventilated areas with impervious surfaces and adequate containment in the event of spills. Batteries should red under roof for protection against adverse weather conditions. Separate from incompatible materials. Store and handle only
	th adequate water supply and spill control. Avoid damage to containers. Keep away from fire, sparks and heat. Keep away from metallic objects could
	terminals on a battery and create a dangerous short-circuit.
<u>Charging</u>	
	possible risk of electric shock from charging equipment and from strings of series connected batteries, whether or not being charged. Shut-off power to
U	henever not in use and before detachment of any circuit connections. Batteries being charged will generate and release flammable hydrogen gas.
Charging	pace should be ventilated. Keep battery vent caps in position. Prohibit smoking and avoid creation of flames and sparks nearby.
Veenfoor	and any masterial and an even hottonics being showed

Wear face and eye protection when near batteries being charged.

X. STABILITY AND REACTIVITY	. 1002380
Stability: Stable X_ Unstable	
This product is stable under normal conditions at ambient temperature.	
Conditions To Avoid: Prolonged overcharge; sources of ignition	
Incompatibility: (Materials to avoid)	
Sulfuric Acid: Contact with combustibles and organic materials may cause fire and explosion. Also reacts violently with strong reducing agents,	
metals, sulfur trioxide gas, strong oxidizers and water. Contact with metals may produce toxic sulfur dioxide fumes and may release flammable	
hydrogen gas.	
Lead Compounds: Avoid contact with strong acids, bases, halides, halogenates, potassium nitrate, permanganate, peroxides, nascent hydrogen	
and reducing agents.	
Arsenic compounds: strong oxidizers; bromine azide. NOTE: hydrogen gas can react with inorganic arsenic to form the highly toxic gas-arsine.	
Hazardous Decomposition Products:	
Sulfuric Acid: Sulfur trioxide, carbon monoxide, sulfuric acid mist, sulfur dioxide, and hydrogen sulfide.	
Lead Compounds: High temperatures likely to produce toxic metal fume, vapor, or dust; contact with strong acid or base or presence of nascent	
hydrogen may generate highly toxic arsine gas.	
Hazardous Polymerization:	
Will not occur	
XI. TOXICOLOGICAL INFORMATION	
Routes of Entry:	
Sulfuric Acid: Harmful by all routes of entry.	
Lead Compounds: Hazardous exposure can occur only when product is heated, oxidized or otherwise processed or damaged to create dust, vapor	
or fume. The presence of nascent hydrogen may generate highly toxic arsine gas.	
Inhalation:	
Sulfuric Acid: Breathing of sulfuric acid vapors or mists may cause severe respiratory irritation.	
Lead Compounds: Inhalation of lead dust or fumes may cause irritation of upper respiratory tract and lungs.	
Ingestion:	
Sulfuric Acid: May cause severe irritation of mouth, throat, esophagus and stomach.	
Lead Compounds: Acute ingestion may cause abdominal pain, nausea, vomiting, diarrhea and severe cramping. This may lead rapidly to systemic	
toxicity and must be treated by a physician.	
Skin Contact:	
Sulfuric Acid: Severe irritation, burns and ulceration.	
Lead Compounds: Not absorbed through the skin.	
Arsenic Compounds: Contact may cause dermatitis and skin hyper pigmentation.	
Eve Contact:	
Sulfuric Acid: Severe irritation, burns, cornea damage, and blindness.	
Lead Components: May cause eye irritation.	
Effects of Overexposure - Acute:	
Sulfuric Acid: Severe skin irritation, damage to cornea, upper respiratory irritation.	
Lead Compounds: Symptoms of toxicity include headache, fatigue, abdominal pain, loss of appetite, muscular aches and weakness, sleep	
disturbances and irritability.	
Effects of Overexposure - Chronic:	
<u>Sulfuric Acid</u> : Possible erosion of tooth enamel, inflammation of nose, throat and bronchial tubes.	
Lead Compounds: Anemia; neuropathy, particularly of the motor nerves, with wrist drop; kidney damage; reproductive changes in males and	
females. Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some toxicologists report abnormal	
conduction velocities in persons with blood lead levels of 50mcg/100 ml or higher. Heavy lead exposure may result in central nervous system dama	ge,
encephalopathy and damage to the blood-forming (hematopoietic) tissues.	
Carcinogenicity: Sulfuric Acid: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid mist containing sulfuric acid" as a	
Group 1 carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfuric	
acid solutions contained within a battery. Inorganic acid mist (sulfuric acid mist) is not generated under normal use of this product. Misuse of the	
product, such as overcharging, may result in the generation of sulfuric acid mist.	0
Lead Compounds: Lead is listed as a Group 2A carcinogen, likely in animals at extreme doses. Per the guidance found in OSHA 29 CFR 1910.120	U
Appendix F, this is approximately equivalent to GHS Category 1B. <u>Proof of carcinogenicity in humans is lacking at present.</u>	
Arsenic: Listed by National Toxicology Program (NTP), International Agency for Research on Cancer (IARC), OSHA and NIOSH as a	
carcinogen only after prolonged exposure at high levels.	
Medical Conditions Generally Aggravated by Exposure:	
Overexposure to sulfuric acid mist may cause lung damage and aggravate pulmonary conditions. Contact of sulfuric acid with skin may aggravate	
diseases such as eczema and contact dermatitis. Lead and its compounds can aggravate some forms of kidney, liver and neurologic diseases.	

### Acute Toxicity: Inhalation LD50:

<u>Electrolyte:</u> LC50 rat: 375 mg/m3; LC50: guinea pig: 510 mg/m3 <u>Elemental Lead:</u> Acute Toxicity Point Estimate = 4500 ppmV (based on lead bullion)

Elemental Arsenic: No data

## Oral LD50:

Electrolyte: rat: 2140 mg/kg Elemental Lead: Acute Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion) Elemental Arsenic: LD50 mouse: 145 mg/kg Elemental Antimony: LD50 rat: 100 mg/kg

#### Additional Health Data:

All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most inhalation problems can be avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion: wash hands, face, neck and arms thoroughly before eating, smoking or leaving the worksite. Keep contaminated clothing out of non-contaminated areas, or wear cover clothing when in such areas. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated areas. Work clothes and work equipment used in contaminated areas must remain in designated areas and never taken home or laundered with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment.

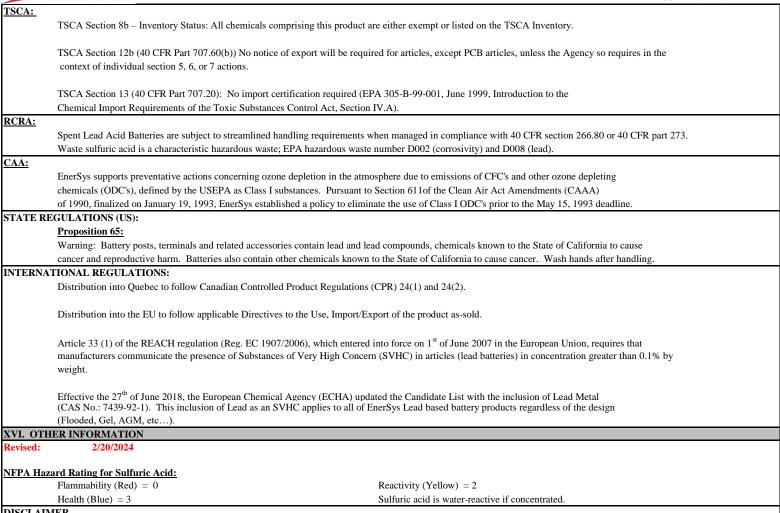

The 19<sup>th</sup> Amendment to EC Directive 67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase 61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms.

Risk phrase 61:	May cause harm to the unborn child, applies to lead compounds, espe	ecially soluble forms.
XII. ECOLOGICAL INFOR	RMATION	
Environmental Fate:		
Lead is very pers	sistent in soil and sediments. No data on environmental degradation.	Mobility of metallic lead between ecological compartments is slow.
Bioaccumulation	n of lead occurs in aquatic and terrestrial animals and plants but little	bioaccumulation occurs through the food chain.
Most studies inc	lude lead compounds and not elemental lead.	
Environmental Toxicity: Aq	uatic Toxicity:	
Sulfuric acid:	24-hr LC50, freshwater fish (Brachydanio rerio): 82 mg/L	
	96 hr- LOEC, freshwater fish (Cyprinus carpio): 22 mg/L	
Lead:	48 hr LC50 (modeled for aquatic invertebrates): <1 mg/L, based of	on lead bullion
Arsenic:	24 hr LC50, freshwater fish (Carrassisus auratus) >5000 g/L.	
Additional Information:		
· No known effe	cts on stratospheric ozone depletion.	
<ul> <li>Volatile organi</li> </ul>	c compounds: 0% (by Volume)	
· Water Endange	ring Class (WGK): NA	
XIII. DISPOSAL CONSIDE	CRATIONS (UNITED STATES)	
Spent batteries: Send to second	ondary lead smelter for recycling. Spent lead-acid batteries are not re	gulated as hazardous waste when the requirements of
40 CFR Section 266.80 are m	et. This should be managed in accordance with approved local, state	and federal requirements. Consult state environmental
agency and/or federal EPA.		
Electrolyte:		
Place neutralized slurry into s	ealed containers and handle as applicable with state and federal regul	lations. Large water-diluted spills, after
neutralization and testing, sho	uld be managed in accordance with approved local, state and federal	requirements. Consult state environmental
agency and/or federal EPA.		
Following local, State/Provinc	ial, and Federal/National regulations applicable to end-of-life charac	teristics will be the responsibility of the end-user.
XIV. TRANSPORT INFOR	MATION
