

# EnerSys CY2024 Environmental Data

Since establishing our Sustainability Team in 2020, EnerSys has published annual calendar year data as part of our commitment to transparency, accountability, and continuous improvement for our customers, employees, investors, and other stakeholders. These disclosures also demonstrate the positive steps we have taken on our journey to achieve net carbon neutrality—by 2040 for Scope 1 greenhouse gas emissions and by 2050 for Scope 2 emissions.

In response to evolving global sustainability reporting standards, including the European Sustainability Reporting Standards (ESRS), EnerSys is transitioning from a calendar year to a fiscal year reporting cycle. We plan to publish our FY25 sustainability data, aligned with the European Union's Corporate Sustainability Reporting Directive's ESRS, in the Q3 FY26. To maintain transparency during this transition, we are sharing our CY24 data below to bridge the gap between reporting cycles.

Aligned with internationally recognized reporting standards, the table below is intended to provide quantitative information covering the calendar years, 2019, 2020, 2021, 2022, 2023 and 2024. This table presents key environmental data covering EnerSys globally. The scope includes manufacturing, warehouse, service and distribution centers, offices and other facilities, both owned and leased, totaling around 180 locations.

The data was gathered by the EnerSys Sustainability Team using the Tracera platform. Greenhouse gas data covers Scope 1 and Scope 2 emissions, based on measured utility data. Where utility data was not available, estimates were made in alignment with Greenhouse Gas Protocol standards. Global warming potential and emissions factor conversions are based on the latest guidance from:

- International Energy Agency (IEA)
- The Climate Registry - DEFRA
- IPCC Fourth Assessment Report (AR4 -100 year)

<sup>1</sup> Figures in the table below have been rounded and may therefore not fully align

<sup>2</sup> Includes electricity, natural gas, propane, coal and other petroleum fuels.

<sup>3</sup> Whereas EnerSys does not specifically contract renewable electricity, this figure does not account for the percentage of renewable electricity that is de facto part of the total electricity consumed across various geographies as part of the grid. It is, however, accounted for in the total Scope 2 greenhouse gas emissions.

<sup>4</sup> Certified as Hydroelectric power in Brazil

<sup>5</sup> CY24 Scope 3 emissions will be calculated and reported at a later date.

<sup>6</sup> Pb emitted to the atmosphere per year

<sup>7</sup> Shipped for disposal

<sup>8</sup> Water is consumed in products as well as through evaporation.

<sup>9</sup> As a percentage of discharged water. Note that a significant percentage of water recycling takes place in our Chongqing, China plant which includes cycling water in cooling towers. Like for like data not available for some values for 2019-2021.
